

Java (?? ??????? ?? ????????) java-jwt)

```
import com.auth0.jwt.JWT;  
import com.auth0.jwt.algorithms.Algorithm;  
  
import java.util.Date;  
  
public class Main {  
    public static void main(String[] args) {  
        String key = "your_secret_key";  
        Algorithm algorithm = Algorithm.HMAC256(key);  
  
        String token = JWT.create()  
            .withIssuer("Your domain")  
            .withAudience("Your level")  
            .withIssuedAt(new Date())  
            .withClaim("uuid", "Your ID")  
            .withClaim("uip", "Your IP")  
            .sign(algorithm);  
  
        System.out.println(token);  
    }  
}
```
