

Python (?? ??????? ?? ???????? PyJWT)

```
import jwt
import time

key = "your_secret_key"
header = {
    "alg": "HS256",
    "typ": "JWT"
}
payload = {
    "iss": "Your domain",
    "aud": "Your level",
    "iat": int(time.time()),
    "uuid": "Your ID",
    "uip": "Your IP"
}

token = jwt.encode(payload, key, algorithm='HS256', headers=header)
print(token)
```
